

Welcome to RibbStyle!

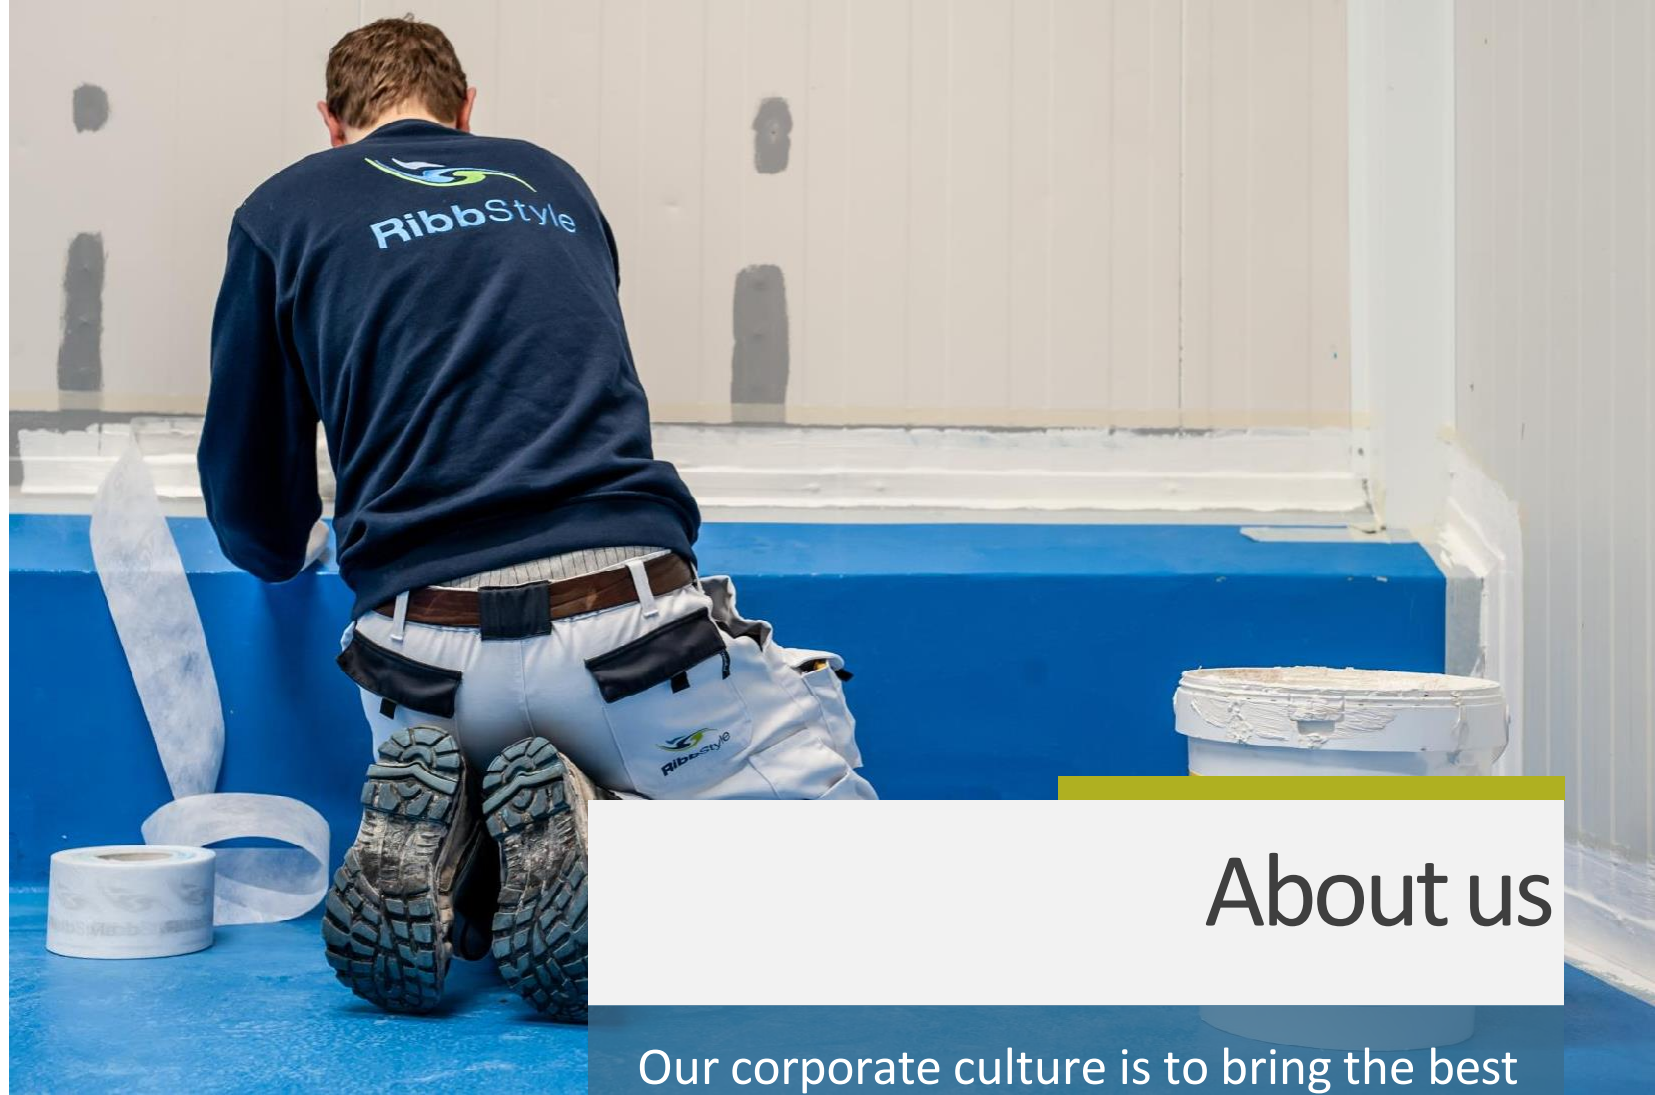

Coatings to protect and preserve

What do we do?

- International manufacturer and supplier of professional coatings for various industries
- Imported by Optima Coatings in South Africa and installed by an Optima Coatings approved licensed contractor

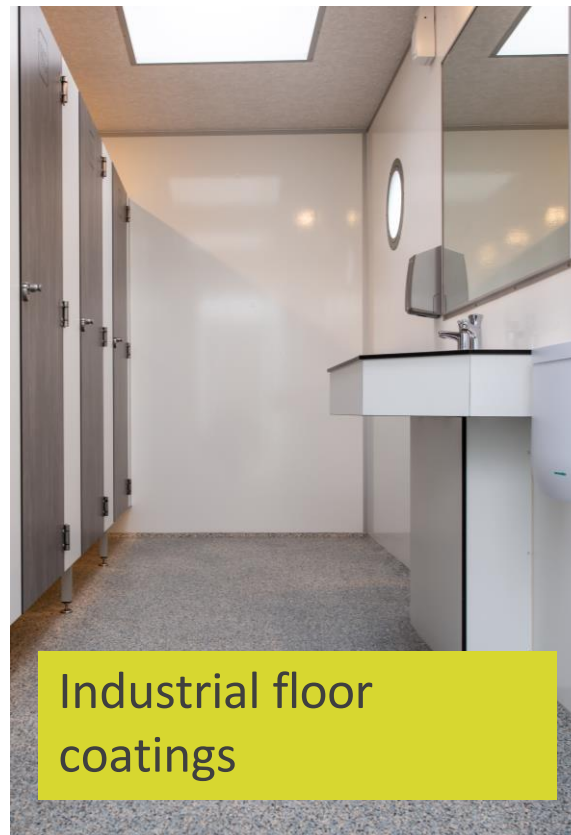

Optima
COATINGS

About us

Our corporate culture is to bring the best and most innovative solutions to our customers.

Our products

Gastight coatings

Your storage and cold rooms optimally manageable

- Cold rooms
- Controlled atmosphere rooms (CA & DCA)
- Ripening rooms
- Treatment rooms
- Storage rooms

Gastight coatings

Properties

- High gastightness
- High elasticity
- Hygienic finish
- Durable and flexible
- Low maintenance

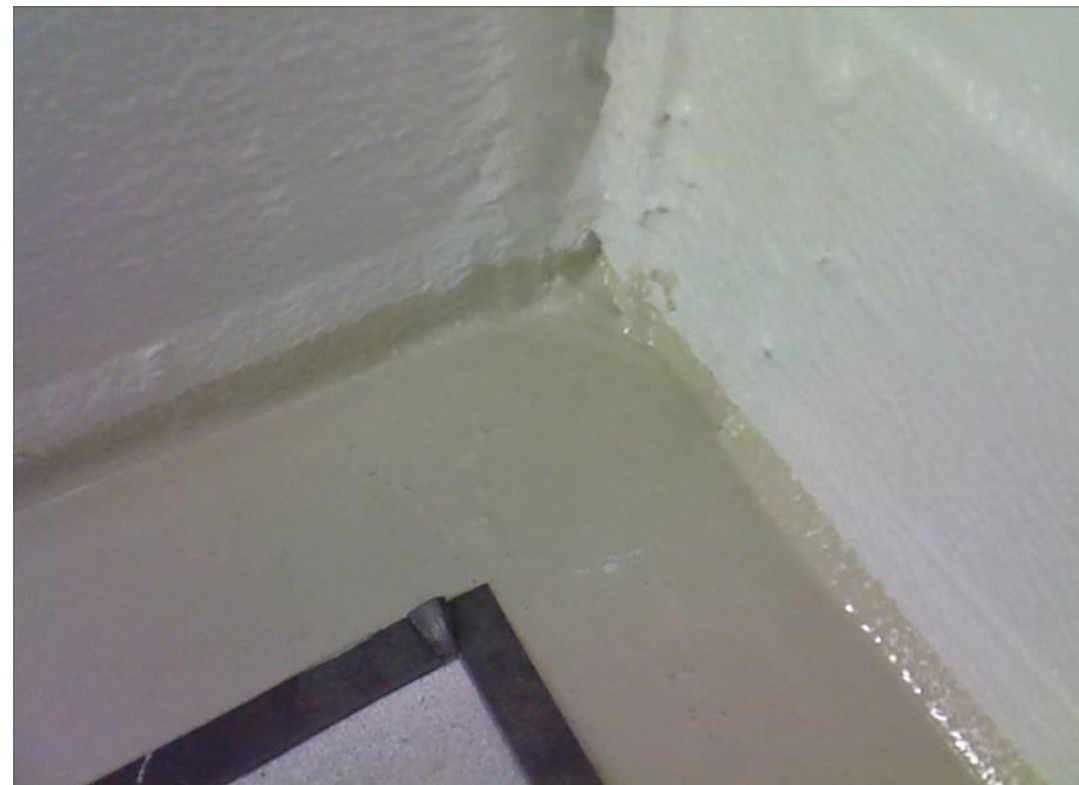

Gastight coatings

RibbFill coating system keeps your cells at optimum regime and preserves your fruit better

Sealing seams in ULO (ULTRA LOW OXYGEN) cells

Wall/floor connection watertight using MS technology

The fundamental idea behind our gastight coatings is to provide our customers with a long-term solution, so they don't have to worry about the condition of their storage and cold rooms every year.

What does it mean to apply these gastight coatings to your storage rooms?

A long term solution

- The cold rooms are easily kept in a cold temperature regime
- Lower consumption of the nitrogen generator
- Lower energy consumption and less maintenance
- The fruit is stored – increased quality, prolonged freshness lowering spoilage, and slowing ripening
- The process is better and a more secure control

More conveniences, less worries!

The benefits of a gastight room

High efficiency of the storage and treatments

- No loss of CO₂ and no entrance of oxygen
- Duration of CO₂ injection and treatment is shorter
- Control and security, what is inside the room stays inside the room
- Uniform treatment of products

A powerful system

Possibilities

- Apply by our licensed approved application team
- Apply our products by yourself in certain circumstances

Application

- In at least two layers
- Consumption 2 kg/m²
- Directly on polystyrene and PU foam

Application: Pre-treat panel joints with RibbSeal sealant

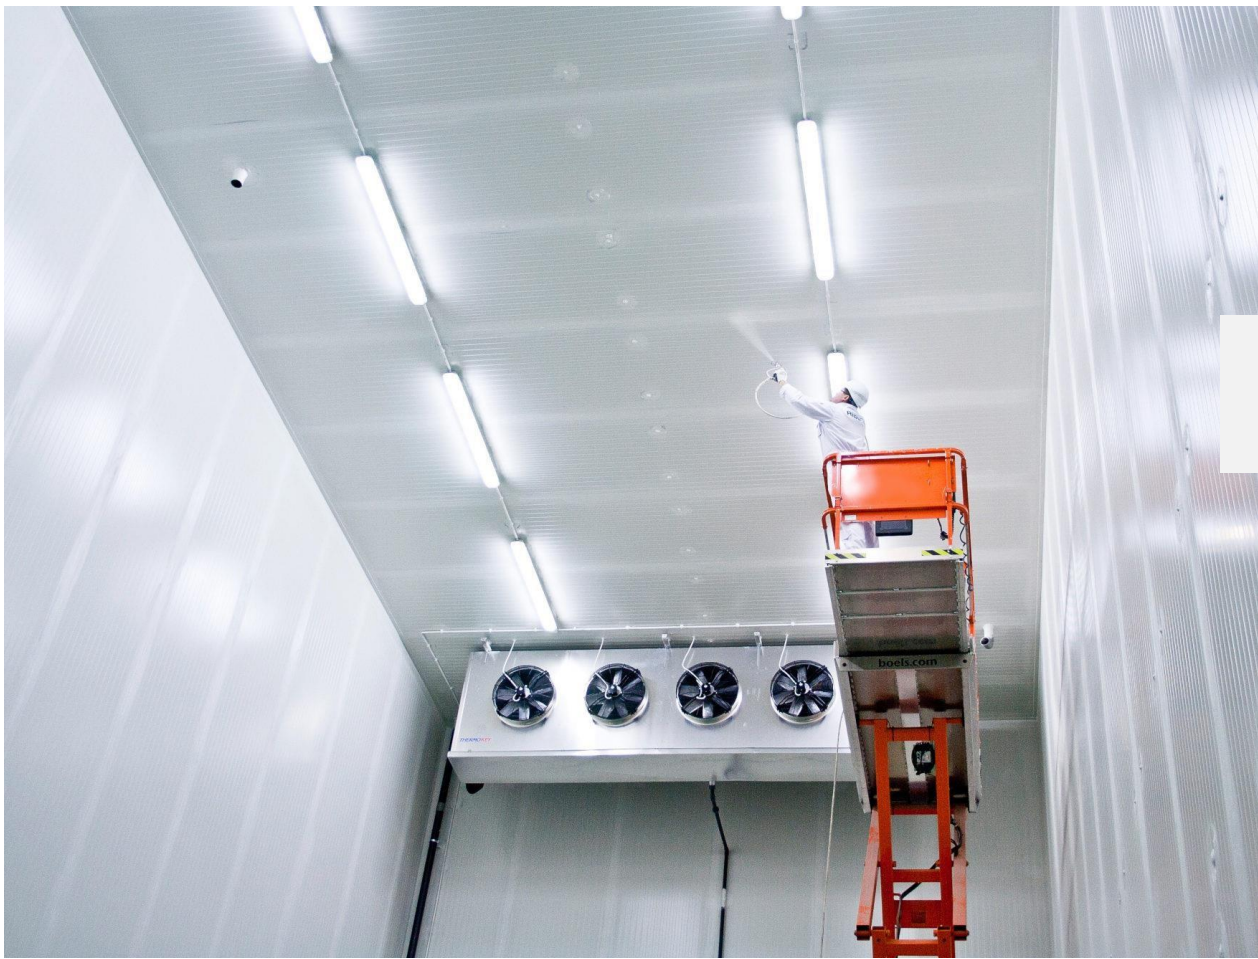

RibbSeal is a re-paintable MSP hybrid polimer sealant

- No confinement of air underneath the coating
- Creates a solid base and adhesion for the coating
- Achieve the right layer thickness and avoid leakages
- Silicone sealant creates contamination with a poor adhesion result

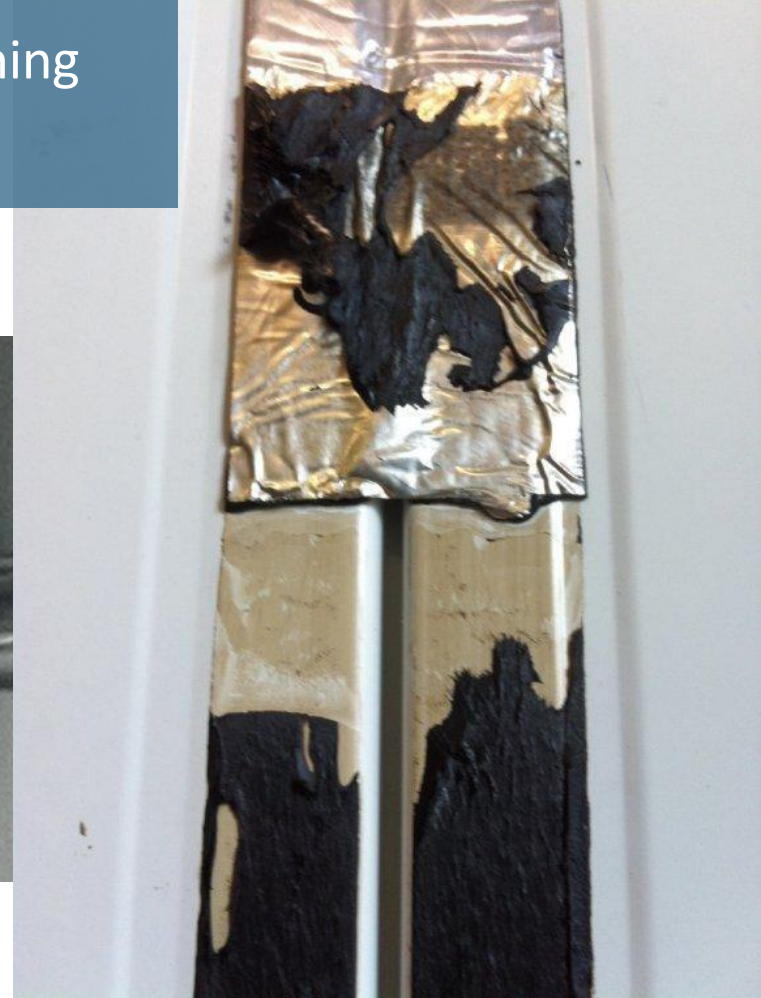

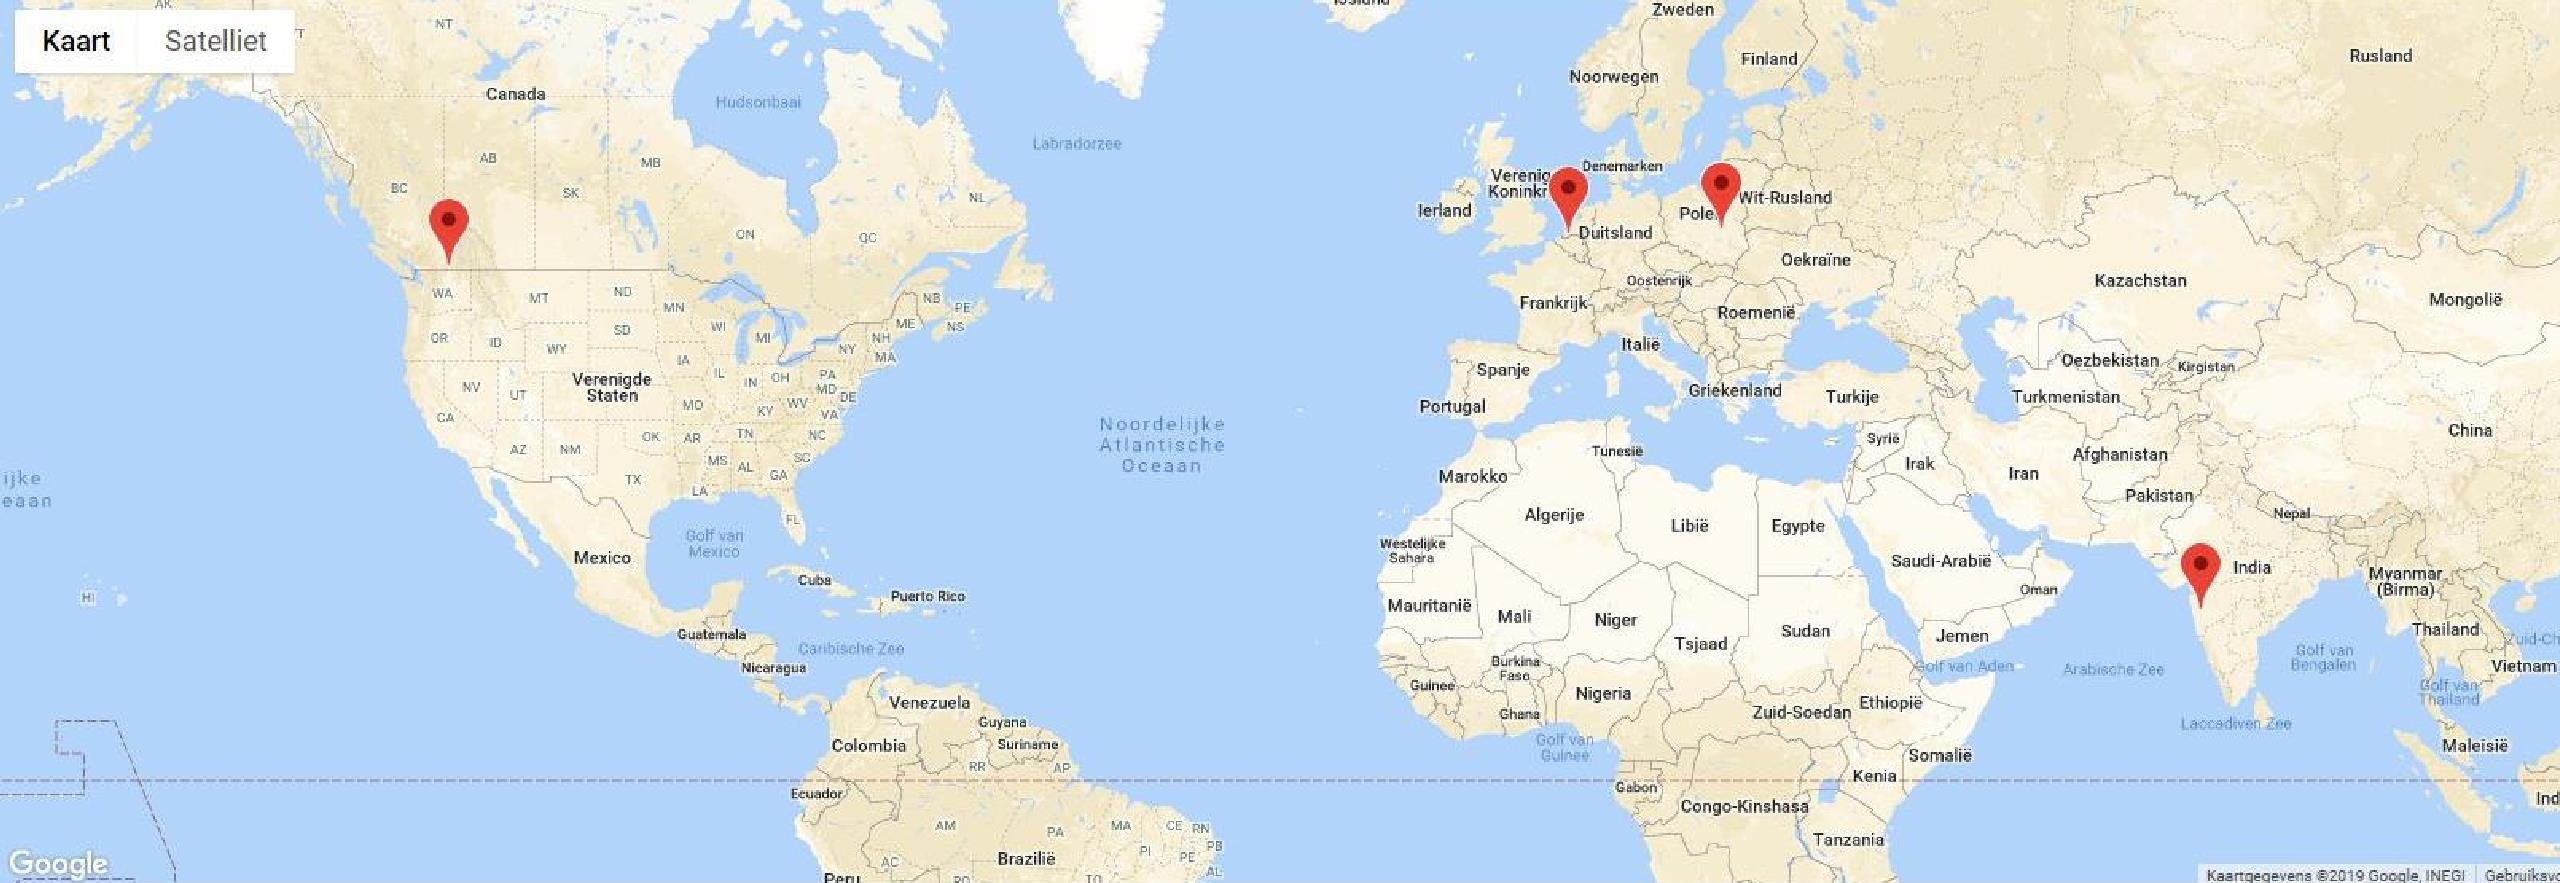

Application: RibbFillcoating system

Application: Do not use only sealant or other short-term methods

Spare yourself the short-term investment, the returning maintenance and the insecurity of leakages.
